

Highlight lines

The following code-blocks should dim all lines that are not marked with `emphasize-lines`, and so the effect is to highlight the selected lines.

This feature is an alias of the `hl_lines` feature, since this option is used by Sphinx.

With this block of plain text, lines 1 and 3 are dimmed:

```
1 To be
2 or not to be
3 that is the question
```

For this block of Python, lines 1, 2, 4, 6, 8, 9 and 10 are dimmed:

```
1 number = 0
2
3 if number > 0:
4     print("Positive number")
5 elif number == 0:
6     print('Zero')
7 else:
8     print('Negative number')
9
10 print('This statement is always executed')
```
